

# Corporate Foreign Tax Credit, 1996: An Industry and Geographic Focus

by Nick Ward

For 1996, U.S. corporations were able to claim a record-high foreign tax credit of \$40.3 billion. This amount represents an increase of nearly \$10 billion from 1995. Corporations with credits earned \$150.8 billion in foreign-source taxable income, paying \$41.2 billion in income taxes to foreign governments. Under the foreign tax credit provisions, these corporations were able to lower their regular U.S. tax liability from \$130.7 billion (U.S. income tax before credits) to \$90.5 billion, a 30.8-percent reduction. Other credits, including the U.S. possessions tax credit and the general business credit, further reduced their U.S. tax liability to \$84.3 billion.

U.S. manufacturers remain the most significant industry group in the key measurements of foreign activity. U.S. manufacturers accounted for 66 percent of total foreign-source taxable income, 71 percent of total current-year foreign taxes paid, accrued, or deemed paid, and nearly 73 percent of total foreign tax credit claimed for 1996 [1]. However, the types of U.S. corporations receiving foreign-source taxable income have expanded and diversified in recent years. Corporations classified in the finance, insurance, and real estate industry grouping (FIRE) have rapidly increased their shares of both foreign-source taxable income and total foreign tax credit claimed. This industry's share of the total foreign tax credit claimed has more than doubled from less than 7 percent for 1990 to almost 16 percent for 1996.

As in prior years, the largest shares of foreign-source taxable income were generated in the United Kingdom, Canada, Japan, Germany, and the Netherlands. With nearly \$20 billion of the \$150.8 billion (or 13.2 percent) in foreign-source taxable income, the United Kingdom provided the largest amount of income. Overall, the 12 nations of the European Economic Community combined for 38 percent of foreign-source taxable income, 21 percent of current-year taxes paid or accrued, and 45 percent of current-year tax deemed paid.

*Nick Ward is an economist with the Special Studies Returns Analysis Section. This article was prepared under the direction of Chris Carson, Chief.*

## Background

U.S. corporations are subject to U.S. taxation on their worldwide income [2]. Their foreign-source income is also subject to taxation by the country in which the income is earned. Double taxation of U.S. corporation's income occurs when the same income is taxed first by the foreign government and, again, by the U.S. Since the Revenue Act of 1918, the foreign tax credit has served to reduce the impact of double taxation. The foreign tax credit provisions allow U.S. corporations to offset a portion or all of the U.S. tax on their foreign source taxable income with a credit for taxes paid to a foreign tax authority [3].

Although foreign tax credit provisions have been present for over 80 years, their nature and restrictions have been modified many times. The first limitation, an "overall limitation" on the amount of the foreign tax credits, was first introduced as part of the Revenue Act of 1921. Prior to this alteration, the provisions allowed an unlimited credit that, in effect, offset some of the U.S. tax on income earned within the United States. Congress included the overall limitation to restrict the foreign tax credit to an amount equivalent to the U.S. tax on foreign-source taxable income. Computationally, this limitation is equal to the amount of U.S. tax multiplied by the ratio of foreign-source to worldwide taxable income. This places a ceiling on the amount of creditable taxes. Corporations are then allowed to credit the lesser of their creditable taxes or the amount of this limit. Except for a brief period beginning after the enactment of the Internal Revenue Code of 1954 and lasting until the passage of Public Law 86-870 in 1960, the overall limitation has been an integral part of the foreign tax credit provisions.

At various times, Congress has also incorporated a "per-country" limitation, which required taxpayers to calculate a foreign tax credit limitation on a country-by-country basis. Congress included this limitation to prevent taxpayers from using foreign taxes incurred in a higher-tax foreign country to offset U.S. taxes on income earned in a lower-tax foreign

For 1996, U.S. corporations were able to credit almost 84 percent of their available foreign taxes.

## Corporate Foreign Tax Credit, 1996: An Industry and Geographic Focus

country. In various forms, this per-country limitation was operational from 1932 until 1976. For the periods 1932-1954 and 1960-1976, both the per-country limitation and the overall limitation were in effect.

Beginning with the passage of the Revenue Act of 1962, foreign tax credit limitations based on statutory categories of income have also been included in the foreign tax credit provisions. Initially, under the 1962 Act, Congress required taxpayers to compute a separate limitation for nonbusiness interest income. The intent of this requirement was to remove the incentive for corporations with foreign-source income, taxed at rates in excess of the U.S. rate, from making interest-bearing investments abroad to generate additional foreign income. Since this foreign-source income was subject to little or no foreign tax, this additional lower-taxed foreign income, combined with the higher-taxed foreign income, enabled corporations to increase the total foreign tax credit claimed.

From 1992 to 1996, an 87-percent increase in foreign tax credit accompanied a jump of over 90 percent in income subject to U.S. tax.

The purpose of each limitation has remained the same even as the number of separate categories of income requiring separate limitations has increased dramatically, especially under the provisions of Tax Reform Act of 1986. For 1996, taxpay-

ers had to compute a separate foreign tax credit limitation for the following statutory categories of foreign-source income (described in the Explanation of Selected Terms section below): passive income, high withholding tax interest, financial services income, shipping income, dividends from “noncontrolled” section 902 foreign corporations, dividends from Interest Charge-Domestic International Sales Corporations (IC-DISC’s) or former DISC’s, taxable foreign trade income attributable to Foreign Sales Corporations (FSC’s) [4], certain distributions from Foreign Sales Corporations (FSC’s) or former FSC’s, and “all other income from outside the United States” (commonly referred to as general limitation income). Income re-sourced by Treaty (under Section 904(g) primarily) and income from sanctioned countries (Section 901(j)) became separate limitation catego-

ries under the Taxpayer Relief Act of 1997. For 1996, however, both income categories are included in a combined limitation category.

In addition, Congress first allowed a carryover of “unused” foreign tax credits in the Technical Amendments Act of 1958. For 1996, the carryover provision allowed foreign taxes that exceeded the limitations to first be carried back 2 years and then carried forward 5 years and used as a credit for those years, to the extent the foreign taxes did not exceed the limitations for each year. The foreign taxes available for the credit shown in this article include only those carried forward to 1996 from previous years; no taxes carried back to 1996 are included in the statistics.

### Foreign Tax Credit

The foreign tax credit of \$40.3 billion for 1996 easily eclipses the former record-high of \$36.8 billion claimed for 1979 [5]. The \$40.3 billion also represents an increase by nearly one-third from 1995. The reason behind this large increase appears to be simple; the components of the foreign tax credit all increased. Figure A shows the major components of the foreign tax credit calculation—income subject to U.S. tax (or worldwide income), U.S. income tax before credits, foreign-source taxable income, current-year foreign taxes, and the resulting total foreign tax credit claimed—for 1992 through 1996. As shown in Figure A, income subject to U.S. tax (worldwide income), U.S. income tax before credits, foreign-source taxable income, and current-year foreign taxes have all climbed steadily as the foreign tax credit rose from \$21.5 billion for 1992 to \$40.3 billion for 1996. During those 5 years, an 87-percent increase in foreign tax credit accompanied a jump of over 90 percent in income subject to U.S. tax.

More importantly, the large increases in income and taxes have been proportionate, leaving the components internally consistent for 1992 through 1996. With the exception of 1992, foreign-source taxable income as a percentage of worldwide income (column 5) has remained in the 39-to-41-percent range. Current-year foreign taxes as a percentage of foreign-source income, which serves as a proxy for the effective tax rate imposed by foreign governments on U.S. corporations’ foreign-source taxable income, has been only slightly variable, residing within the

<sup>1</sup> For 1996, foreign-source taxable income is reported as "foreign taxable income (less loss) before adjustments," in Table 1, column 37 at the end of this article.

<sup>2</sup> Foreign-source taxable income (column 4) divided by income subject to U.S. tax (column 2). Worldwide taxable income is equal to income subject to U.S. tax.

<sup>3</sup> For 1996, current-year foreign taxes are reported as "foreign taxes paid, accrued, and deemed paid" in Table 1, column 43, at the end of this article.

<sup>4</sup> Current-year foreign taxes (column 6) divided by foreign-source taxable income (column 4).

<sup>5</sup> The difference between current-year foreign taxes (column 6) and the foreign tax credit is due to: (1) carryforward of creditable taxes from prior years, (2) reduction of certain non-creditable current-year taxes, and (3) the effect of the credit limitation.

<sup>6</sup> Foreign tax credit (column 8) divided by U.S. income tax before credits (column 3).

range of 25 to 27 percent. Also, corporations were able to offset a slightly higher percentage of their U.S. income tax (30.8 percent) for 1996 than for 1993, 1994, or 1995, but not as much as for 1992 (when the higher percentage of foreign-source income, mentioned above, increased the limitation). The overall effect of these slightly varying percentages, however, is minimal. U.S. corporations have experienced stable and balanced increases in both worldwide and foreign-source income since 1992. Current-year foreign taxes and the foreign tax credit claimed have merely followed the trend.

### Factors Affecting the Amount of Foreign Tax Credit Claimed

As seen in Figure A, the current-year foreign taxes comprise a great deal of corporations' eventual foreign tax credit. Greater taxes paid can, subject to the effects of the limitation provisions, result in a greater credit. The foreign tax credit, however, includes more than just current-year foreign taxes. The total pool of creditable taxes available to a corporation equals current-year foreign taxes, minus certain non-creditable current-year foreign taxes, plus carryover of creditable taxes from prior years [6].

For 1996, corporations were required to reduce their pool of current-year foreign taxes available for

credit by nearly \$1.8 billion. This represents an increase from 1992 and 1994, but a slight drop in relative importance as the percentage of taxes eventually reduced dropped from almost 6 percent for 1992 to 5 percent for 1994 to 4.3 percent for 1996. The bulk of this reduction, recorded on Form 1118, Schedule G, *Reduction of Taxes, Paid, Accrued, or Deemed Paid*, is from reductions of oil and gas extraction taxes under Section 907. To a much smaller extent, corporations are also required to reduce their pool of current-year taxes available for credit under a variety of other provisions, including Internal Revenue Code section 901(j), which disallows certain taxes paid to sanctioned countries. The amount of current-year taxes disallowed for credit has been relatively small since the mid 1980's. Figure B shows the total pool of current-year foreign taxes for the past 10 even years by combining the amount of the reduction with the amount of creditable current-year taxes after reduction. The full height of each bar indicates how much credit would have been available to corporations without the reduction provisions described above. Corporations have been required to reduce their creditable current-year foreign taxes an average of only 5 percent since the mid-1980's. Before then, and especially in the late 1970's, reductions in taxes related to oil and gas

## Corporate Foreign Tax Credit, 1996: An Industry and Geographic Focus

Figure B

### Reductions in Creditable Current-Year Foreign Taxes, Even Tax Years 1978-1996

extraction played a much bigger role. For 1978, 1980, and 1982, for example, current-year foreign taxes were reduced by 19.3, 13.7, and 9.1 percent, respectively.

After reducing their current-year taxes, the foreign tax credit provisions allow corporations to carry forward unused foreign tax credits for a period of up to 5 years and carry back up to 2 years [7]. As noted earlier, all statistics included in this article and the following tables show only taxes that have been carried forward from prior years. For 1996, corporations carried forward \$8.7 billion of prior year taxes in addition to the \$41 billion of current-year foreign taxes. Figure C shows carryforward taxes as a percentage of the total pool of taxes available for credit. Clearly, the relative importance of carryforward taxes has varied, but has stabilized recently. Carryforward taxes have accounted for roughly 20 percent of corporations' creditable taxes since 1992. The amount of carryforward has stabilized since being much more volatile (and significant) in the late 1970's and early 1980's. The high carryforward

balances of the era were driven by the petroleum industry. For 1978, corporations engaged in oil and gas extraction accounted for \$17.3 billion, or 90.1 percent, of the \$19.3 billion in carryover indicated for that year. Conversely, for 1996, corporations engaged in oil and gas extraction accounted for less than 5 percent of the \$8.7 billion in carryforward taxes. However other oil-related industries are still generating significant amounts of carryforward taxes. Corporations manufacturing petroleum (including integrated) and coal products represented over 41.3 percent (\$3.6 billion) of the total tax carried forward to 1996.

Figure D summarizes the factors affecting the foreign tax credit calculation for even tax years 1978 through 1996. The total amount of creditable taxes, after reductions and including taxes carried forward from previous years, is shown in column 5. The difference between these amounts and the amount of credit actually claimed (column 6) reflects the effects of the limitation provisions and (far less significantly) any reductions in credit due to international boycott

<sup>2</sup> Current-year foreign taxes (column 1) minus reduction of certain current-year foreign taxes (column 2).

<sup>3</sup> Creditable current-year foreign taxes (column 3) plus carryforward of foreign taxes from prior years (column 4).

## Corporate Foreign Tax Credit, 1996: An Industry and Geographic Focus

provisions. For 1996, after all restrictions of the foreign tax credit have been considered, U.S. corporations were able to credit almost 84 percent of their available foreign taxes. This is a slight increase over recent tax years and is considerably higher than in 1978 and 1982 when carryforward amounts were much more significant.

### Industry Composition

Figure E, which shows the number of returns, foreign-source taxable income, current-year foreign taxes, and foreign tax credit claimed by selected industry group for 1996, provides a summary of foreign income and taxes by the U.S. corporation's industrial classification. Similar to recent years, manufacturing corporations remained the most significant industrial grouping. U.S. corporations involved in manufacturing received the most foreign-

source taxable income, paid out the most in current-year foreign taxes, and claimed the greatest amount of foreign tax credit. U.S. manufacturers reported 66 percent of the total \$151 billion in foreign source taxable income and over 71 percent of the total \$41 billion in current-year foreign taxes. This allowed them to account for nearly 73 percent of the total foreign tax credit claimed. U.S. corporations classified in the petroleum (including integrated) and coal products continued to be the most significant specific industry, with nearly 19 percent of the total foreign tax credit claimed.

Figure E also shows that the finance, insurance, and real estate (FIRE) corporations are second behind those in manufacturing, with 20 percent of the foreign-source taxable income and nearly 15 percent of the total current-year taxes. Figure E also shows each industrial grouping's foreign tax credit as a

## Corporate Foreign Tax Credit, 1996: An Industry and Geographic Focus

percentage of the total foreign tax credit claimed for 1996, 1990, and 1978. Tax Year 1990 was included to provide a recent comparison, while 1978 was included as to demonstrate how much the foreign tax credit has changed in almost 20 years.

Several trends emerge when examining each industry's share of foreign tax credit historically. First, the manufacturing corporations may still produce most of the foreign tax credit, but corporations involved in finance, insurance, and real estate are quickly becoming more significant. Finance, insurance, and real estate corporations' share of the foreign tax credit has grown from only 4 percent for 1978 to nearly 16 percent for 1996. In actuality, most of the increase happened between 1990 and 1996, as the industry's share of the total foreign tax credit claimed more than doubled in these 6 years.

Finance, insurance, and real estate corporations' share of the foreign tax credit has grown from only 4 percent for 1978 to nearly 16 percent for 1996.

Using the foreign tax credit as a measurement also understates the growing importance of finance, insurance, and real estate corporations since income in those industries is usually taxed at a much lower rate than manufacturing income and, thus, would

generate lower amounts of creditable foreign taxes. The growth in foreign-source taxable income has been even more impressive. While total foreign-source taxable income increased by 25 percent from 1995 to 1996, foreign-source taxable income for manufacturing corporations increased only 21 percent. Corporations involved in finance, insurance, and real estate, however, reported 35 percent more foreign-source income in 1996 than in 1995.

A more distinct change in the historical foreign tax credit shares shown in Figure E is that mining corporations, which accounted for almost half of the foreign tax in 1978, dropped to only 2 percent of the credit for 1996. Changes in the oil and gas extraction industry account for nearly all of this reduction in importance. U.S. corporations engaged in foreign oil and gas extraction faced dramatically different tax and political conditions in the mid 1990's than during the late 1970's. Corporations were less likely in 1996 to receive oil and gas extraction income from members of the Organization of Petroleum Exporting

Countries (OPEC) due to the discovery of oil in the North Sea, and corporations generally paid lower foreign taxes on their oil and gas extraction income for 1996 than in the late 1970's. Another reason behind the drastic drop in mining's importance is that oil and gas extraction income is now more likely to be reported by manufacturing corporations, specifically those producing petroleum (including integrated) and coal products. This will be discussed below.

### Oil and Gas Extraction Income

Oil and gas extraction income, deductions, and taxes are reported separately by U.S. corporations claiming a foreign tax credit related to that income [8]. Under Internal Revenue Code section 907, separate rules related to oil and gas extraction income affect the amount of foreign taxes available for corporations to credit. The provisions of Internal Revenue Code section 907 disallow certain foreign taxes and provide another limitation calculation specifically for foreign oil and gas extraction income (FOGEI). Foreign taxes are excluded from the foreign tax credit calculation if they were paid, accrued, or deemed paid at a rate in excess of the applicable U.S. tax rate. Taxes can also be excluded because they were not, in effect, income taxes, but rather royalty payments. Under the foreign tax credit provisions, only income taxes, as viewed through U.S. tax principles, are creditable. This excludes voluntary payments and payments for specific rights or services (such as the right to extract a natural resource).

Figure F shows gross income from foreign oil and gas extraction by both selected industry groups and selected countries for 1996. As mentioned above, most FOGEI is now reported by U.S. corporations classified as manufacturers of petroleum (including integrated) and coal products. For 1996, the oil and gas extraction industry accounted for less than 9 percent of the total oil and gas extraction related gross income reported. Figure F also lists the countries generating the greatest amounts of gross income associated with foreign oil and gas extraction for 1996. As for both 1994 and 1995, corporations reported the most gross income from the United Kingdom and Indonesia. Seven countries (the United Kingdom, Indonesia, Canada, the Netherlands, Australia, Norway, and Nigeria) together accounted for 66 percent of all gross income from foreign oil and gas extraction activities.

### Geographic Focus

As in past years, a considerable portion of the foreign-source income came from a small number of countries. Figure G shows the most significant countries' shares of total foreign-source taxable income for 1996. The United Kingdom, Canada, Japan, Germany, and the Netherlands accounted for 44 percent of the foreign-source taxable income reported for U.S. corporations with foreign tax credits for 1996. The importance of these five countries is not surprising since their share totaled 43 percent for 1995, approximately 38 percent for 1994, and 41 percent for 1993. With three members among the top five in generating foreign-source taxable income, Europe, and more specifically the European Economic Community, was the most significant geographic region. Figure H shows foreign-source taxable income, current-year foreign taxes paid or accrued, and current-year tax deemed

paid for selected geographic regions and Canada. U.S. corporations are extremely active within European Economic Community countries since the 12 members of that organization accounted for almost twice as much foreign-source taxable income as the next largest region, Asia.

Regional differences in taxes are clearer when examining the two components of current-year foreign taxes, current-year foreign taxes paid or accrued, and current-year tax deemed paid. U.S. corporations reported 37 percent of their current-year foreign taxes paid or accrued and deemed paid going to European Economic Community members for 1996. Nearly 80 percent, or \$12 billion, of the \$15 billion collected by European Economic Community members was tax deemed paid. This represents a 45-percent share of total tax deemed paid by all U.S. corporations claiming a foreign tax credit for 1996. Asian countries, despite collecting less in combined taxes, received more current-year foreign taxes paid or accrued than European Economic Community members—collecting 33 percent of the total versus only 21 percent of the total being paid to European Economic Community members. Asian countries

FigureH

### Foreign-Source Taxable Income, Taxes Paid, and Taxes Deemed Paid, by Geographic Region, Tax Year 1996

Billions of dollars

also generated over 20 percent of the current-year tax deemed paid.

Figure I shows foreign gross income, both in total and by selected types for the major geographic regions discussed in this article. The distribution of income types follows the distribution of taxes deemed paid. Corporations received over 41 percent of their dividend income from the European Economic Community, but only 15 percent from Asian countries. Corporations continue to receive the greatest amount of dividend income from European Economic Community members, while income from the next largest region, Asia, is more likely to be of another type. For example, corporations reported only 21 percent (or \$29 billion of \$140 billion) in combined gross service

and other income from members of the European Economic Community versus 27 percent from Asian countries.

#### Summary

Worldwide taxable income, foreign-source taxable income, and current-year foreign taxes paid, accrued, or deemed paid all continued their recent upward trends for 1996. This allowed U.S. corporations to claim a record high foreign tax credit of \$40.3 billion for 1996 as income and taxes increased across the board. Reductions in creditable taxes and the inclusion of prior-year taxes continue to play stable and minor roles in determining the amount of foreign tax credit claimed. As in prior years, the United

Kingdom, Canada, and Japan continued to generate the most foreign-source taxable income. One recent change, though, has been in the industries of the corporations earning foreign-source income and claiming foreign tax credits. Finance, insurance, and real estate corporations have been rapidly increasing their share of foreign income and foreign tax credit since 1990. U.S. corporations with foreign tax credits can no longer be characterized as being manufacturers involved in foreign oil and gas extraction or in the foreign production of goods. Banking and services are gradually becoming more significant abroad and claiming an increasing amount of the foreign tax credit.

### Data Sources and Limitations

The statistics in this article were derived from corporation income tax returns with a foreign tax credit that were included in the 1996 Statistics of Income sample. To be included in the sample, returns had to have accounting periods ending between July 1996 and June 1997. The 1996 corporation income tax return sample included 94,172 returns chosen from the 4,968,336 returns filed for

Tax Year 1996. These returns were selected after administrative processing, but before any audit examination. Because some of the returns with a foreign tax credit that were sampled at the 100-percent rate were received too late to be included in the regular corporate statistics (although estimates for these returns were included), there are slight differences between the more complete statistics on the foreign tax credit presented in this article and those published in *Statistics of Income—1996, Corporation Income Tax Returns* [9].

The foreign tax credit is claimed under section 901 of the Internal Revenue Code. Corporations report the foreign income and taxes related to the credit on Form 1118, *Computation of Foreign Tax Credit—Corporations*, filed with their corporate income tax returns. The statistics in this article are based on information reported on Forms 1118 and related corporate returns. Corporations with “alternative minimum tax” (AMT) had to compute a separate “alternative minimum tax foreign tax credit.” Data on this computation are not reflected in the statistics presented in this article, even if the corporation reported both the regular and AMT computa-

## Corporate Foreign Tax Credit, 1996: An Industry and Geographic Focus

tions, and even if the corporation reported only the AMT computation (because it had AMT but no regular tax). Some corporations reported preliminary data on their tax returns because complete information on their overseas operations was not available on their returns as originally filed, and amended returns were not used for these statistics. However, when necessary, additional information was obtained directly from the taxpayer.

Foreign income and taxes are understated in this article to the extent that they either were not or did not have to be reported on Form 1118. Some corporations did not file this form because they had no U.S. income tax to report and consequently were unable to claim the foreign tax credit for 1996 (any "unused credits" could, however, be carried forward or back for use in other years). Others may have chosen to deduct their foreign taxes from their gross incomes instead of taking the credit.

Because the estimates are based on a sample, they are subject to sampling error. Coefficients of variation (CV's) are used to measure the magnitude of this sampling error. The CV is defined in the section sampling variability in the "SOI Sampling Methodology and Data Limitations" appendix of this publication. Figure J presents CV's for foreign tax credits by selected industrial groups. The smaller the CV, the more reliable the estimate is judged to be.

### Tables 1-3

Table 1, columns 2 through 15, presents statistics on assets, receipts, income, and taxes reported on Form 1120, *Corporation Income Tax Return*, for those corporations claiming a foreign tax credit. Columns 16 through 52 present statistics from Form 1118, *Foreign Tax Credit—Corporations*. Schedule references indicate the parts of Form 1118 from which the data were obtained. Columns 16 through 36 present statistics on foreign income (i.e., income from sources outside the United States) and deductions, reported primarily on Form 1118, Schedule A, *Income of Loss Before Adjustments*.

Although the amounts of "oil and gas income" and deductions (columns 23 and 36, respectively) are included in the summary columns (i.e., columns 16 through 22 and 26 through 35), these amounts are also reported separately (on Form 1118, Schedule I, *Reduction of Oil and Gas Extraction Taxes*) be-

cause oil and gas extraction income is subject to special rules under Internal Revenue Code section 907, which effectively requires a separate limitation calculation for taxes related to oil and gas extraction income. This may result in a reduction of foreign taxes available for credit. Reductions in creditable oil and gas extraction income taxes are included with several other types of reductions in column 41 of Table 1 and column 27 of Table 2.

Section 863(b) income (income partly within and partly without the United States) and foreign branch income are also included in the summary amounts reported in columns 16 through 22 of Table 1, and are also reported separately (on Form 1118, Schedule F, *Gross Income and Definitely Allocable Deductions From Sources Outside the U.S. Under Section 863(b) and for Foreign Branches*) in columns 24 and 25 of Table 1.

Total deductions not definitely allocable to specific types of income (column 32) are equal to the sum of Table 1, columns 33 through 35, relating to research and development, interest, and any other not definitely allocable expenses (any differences are due to taxpayer reporting variations). Total foreign-

<sup>1</sup> Less than .005 percent.

## Corporate Foreign Tax Credit, 1996: An Industry and Geographic Focus

source gross income (Table 1, column 16) less total foreign deductions (Table 1, column 26) is equal to foreign-source taxable income before adjustments (Table 1, column 37).

Adjustments to foreign-source taxable income (reported in column 38 of Table 1) include the allocation of: (1) current-year foreign-source losses, (2) overall foreign losses, and (3) current-year U.S.-source losses as well as the recapture of prior-year overall foreign losses, and recharacterization of prior-year foreign-source losses. These adjustments (reported on Schedule J, *Separate Limitation Loss Allocations and Other Adjustments Necessary to Determine Numerators of Limitation Fractions, Year-End Recharacterization Balances, and Overall Foreign Loss Account Balances*) affect the numerator of the limitation fraction used to compute the foreign tax credit. The income after adjustments (the numerator of the limitation fraction) is reported in column 39 of Table 1. The limitation fraction, foreign-source taxable divided by total taxable income from all sources, is applied to the total U.S. tax against which the credit is allowed to determine any limitation on the foreign tax credit. Taxpayers are required to calculate this limitation for each statutory income category.

Statistics on foreign taxes are reported in columns 40 through 52 of Table 1. Data on foreign taxes paid, accrued, and deemed paid (through related foreign corporations or their subsidiaries) from Form 1118, Schedule B, *Foreign Tax Credit—Corporation*, are reported in columns 43 through 52 of Table 1. Total foreign taxes paid or accrued (Table 1, column 44) are the sum of columns 45 through 51 (any differences are due to taxpayer reporting variations). Table 1, column 42 shows carryovers of excess or “unused” taxes from prior years, which can be added to the 1996 pool of creditable foreign taxes. Total foreign taxes paid, accrued, and deemed paid, plus carryover, are then adjusted for certain items (e.g., reductions of foreign taxes related to oil and gas extraction income under Internal Revenue code section 907, reductions of foreign taxes related to income earned in sanctioned countries under Internal Revenue code section 901(j), and other reductions of creditable taxes) in column 41. Thus, total foreign taxes available for credit (Table 1, column 40) are equal to total foreign taxes paid, accrued, and deemed paid (column 43), plus any

carryover of prior-year excess or “unused” foreign taxes (column 42), less any reduction in foreign taxes (column 41).

Tables 2 and 3 are similar in column format to Table 1 except that they do not provide data from Form 1120—*U.S. Corporation Income Tax Return*. Table 2 presents data reported by industrial grouping and separate statutory limitation income category, while Table 3 presents data by selected geographic region and country.

### Explanation of Selected Terms

**Adjustments to Taxable Income.**—This includes several types of adjustments reported on Schedule J of Form 1118, *Computation of Foreign Tax Credit—Corporations*. These include the allocation of current-year foreign-source losses, overall foreign losses, and current-year U.S.-source losses, as well as the recapture of prior-year overall foreign losses and recharacterization of prior-year foreign-source losses. The net effect of these adjustments is reported in column 38 of Table 1 and column 24 of Table 2.

**Carryover of Foreign Taxes.**—Under Internal Revenue Code section 904, U.S. persons are allowed a 2-year carryback and a 5-year carryforward of “excess” foreign taxes for purposes of computing the foreign tax credit for those years. Such taxes were included in the current-year credit to the extent that they did not exceed the credit limitations for the current year. The 1996 statistics shown in this article include only those taxes carried forward to 1996 from previous years. See column 42 of Table 1 and column 28 of Table 2.

**Controlled Foreign Corporation.**—Under Internal Revenue Code section 957, a foreign corporation is a “Controlled Foreign Corporation” if more than 50 percent of its outstanding voting stock, or more than 50 percent of the value of all its outstanding stock, is owned (directly, indirectly, or constructively) by “U.S. shareholders” on any day during the foreign corporation’s tax year. A “U.S. shareholder” for these purposes is a U.S. person (defined below) who owns 10 percent or more of the foreign corporation’s total combined voting stock. Ownership attribution rules are provided in Code section 958.

**Current-Year Foreign Taxes.**—The current-year foreign taxes include foreign taxes paid, accrued, or deemed paid (defined below) and are re-

## Corporate Foreign Tax Credit, 1996: An Industry and Geographic Focus

ported in column 43 of Table 1, column 29 of Table 2, and column 15 of Table 3. Current-year foreign taxes do not include any carryback or carryforward of foreign taxes from subsequent or prior tax years.

*Financial Services Income.*—Financial services income includes income (as well as “passive income,” defined below) produced in the active conduct of a banking, insurance, financing, or similar business, and certain types of insurance investment income. Financial services income does not include “high withholding tax interest” or dividends from a “noncontrolled” foreign corporation. For corporations with financial services income, “export financing interest” (defined above) is subject to special rules under section 904(d) of the Internal Revenue Code. This separate limitation category is included in Table 2.

*Foreign Dividend Income Resulting from Foreign Taxes Deemed Paid (Gross-up).*—U.S. corporations may take an “indirect” foreign tax credit for taxes paid by a related foreign corporation (generally owned 10 percent or more by the U.S. corporation). Under Internal Revenue Code section 78, these taxes are “deemed paid” by the U.S. corporation under sections 902 and 960(a) with respect to distributions by a foreign corporation and must be included in income as a “dividend gross-up.” This item is shown in columns 7 and 18 of Table 1 and column 4 of Tables 2 and 3.

*Foreign Oil and Gas Extraction Income (FOGEI) and Foreign Oil-Related Income (FORI).*—FOGEI is income related to the extraction of oil and gas, as well as to the sale of assets used in the business, related services, working capital, dividend and partnership distributions, and other oil and gas extraction income. FORI is related to the processing, transporting, selling, or distributing of oil and gas products, rather than to oil and gas extraction.

*Foreign Sales Corporation.*—A Foreign Sales Corporation (FSC) is a company incorporated abroad, created for U.S. exports, and usually controlled by a U.S. person (defined below). A portion of the FSC’s “foreign trade income” is exempt from U.S. taxation.

*Foreign-Source Taxable Income.*—Foreign-source taxable income is equal to foreign gross income (less loss) less deductions and is reported on Schedule A, *Separate Limitation Income or (Loss) Before Adjustments*, of Form 1118. Adjustments to foreign-source taxable income include allocations of

current-year U.S.-source losses and recapture of foreign losses, as well as other adjustments. Foreign-source taxable income is reported as “foreign taxable income (less loss) before adjustments” in Table 1, column 37, Table 2, column 23, and Table 3, column 14. “Foreign taxable income (less loss) after adjustment” is also shown in Table 1, column 39, and Table 2, column 25.

*High Withholding Tax Interest.*—High withholding tax interest is interest subject to foreign withholding tax of at least 5 percent. “Export financing interest” cannot be classified as high withholding tax interest. This separate limitation category is included in Table 2.

*Includable Income of Controlled Foreign Corporations.*—This is the U.S. parent’s total *pro rata* share of income constructively received under Subpart F rules. As such, it consists of Subpart F income (defined below), increases in earnings invested in U.S. property, certain previously excluded Subpart F income, and factoring income. See column 6 of Table 1.

*Income Related to Section 901(j).*—Internal Revenue Code section 901(j) denies the use of foreign tax credit provisions for taxes paid to foreign governments that the United States does not recognize or with whom the United States has severed diplomatic ties. For 1996, these sanctioned countries were Afghanistan, Cuba, Iran, Iraq, Libya, North Korea, Sudan, and Syria. However, taxpayers do occasionally report income from these countries as shown in Table 3. Associated taxes are not creditable and are included in Table 2, column 27.

*Income Related to Section 904(g).*—Internal Revenue Code section 904(g) generally allows certain income (primarily interest and dividends) that otherwise would have been treated as U.S.-source income to be treated as foreign-source income for the purposes of calculating the foreign tax credit.

*Income Subject to U.S. Tax.*—Income subject to U.S. tax, or the corporate tax base (“worldwide taxable income”), is generally equal to net income minus certain statutory nonbusiness deductions. See column 9 of Table 1.

*Interest Charge-Domestic International Sales Corporation.*—Interest Charge-Domestic International Sales Corporations (IC-DISC’s) are certain small domestic corporations formed to export U.S.

## Corporate Foreign Tax Credit, 1996: An Industry and Geographic Focus

products. To elect IC-DISC status, at least 95 percent of a domestic corporation's gross receipts must be "qualified export receipts," and at least 95 percent of its assets must be "qualified export assets."

*Noncontrolled Section 902 Foreign Corporation Dividends.*—A foreign corporation is classified as noncontrolled if at least 10 percent of its stock was owned by one U.S. taxpayer and, collectively, U.S. taxpayers owned 50 percent or less of its stock. This separate limitation category is included in Table 2.

*OPEC Countries.*—The members of the Organization of Petroleum Exporting Countries (OPEC) for 1996 were: Algeria, Ecuador, Gabon, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates, and Venezuela.

*Passive Income.*—Passive income generally includes such income as dividends, interest, rents, and royalties not connected with the active conduct of a trade or business. The passive income category does not include any "export financing interest," any income taxed at a rate higher than the highest U.S. tax rate, any foreign "oil and gas extraction income," or any income that could be classified under any other category (except the "all other" income category). This separate limitation category is included in Table 2.

*Shipping Income.*—Shipping income is generally income obtained from the use (or leasing for use) of a vessel or aircraft in foreign commerce, income from directly-related services, gains on the sale or exchange of a vessel or aircraft used in the performance of such services, and income generated from other space and oceanic activities. Income that would be "foreign base company shipping income" for purposes of determining the income constructively received from Controlled Foreign Corporations for U.S. taxation purposes (under Internal Revenue Code section 954(f)) is also classified as shipping income. This separate limitation category is included in Table 2.

*Specifically Allocable Income.*—Internal Revenue Code section 863(b) provides special rules for determining taxable income from sources outside the United States with respect to gross income derived partly within and partly outside the United States. The income apportioned to sources outside the United States under these special rules is commonly referred to as "Section 863(b) income" and is shown in Table 1, column 25 and Tables 2 and 3, column 11.

*Subpart F Income.*—For 1996, Subpart F of the Internal Revenue Code required certain U.S. shareholders of Controlled Foreign Corporations (CFC's) to include in their gross incomes the shareholder's ratable share of the CFC's: (1) Subpart F income, (2) increase in earnings invested in U.S. property, (3) previously excluded Subpart F income withdrawn from "qualified investments" in less developed countries and in "foreign base company" shipping operations, and (4) factoring income. The Subpart F income of a CFC included: (1) certain insurance income, (2) "foreign base company" income, (3) international boycott participation income, (4) illegal bribes and other payments made to government officials that would be unlawful under the Foreign Corrupt Practices Act of 1977, and (5) income derived from a country, which is not recognized by the United States, with which the United States does not conduct or has severed diplomatic relations, or which repeatedly provides support for acts of international terrorism.

*Taxes Deemed Paid.*—A U.S. corporation, which received actual or constructive dividends from a related foreign subsidiary, is allowed to include a portion of the foreign taxes paid by the subsidiary for purposes of determining the foreign tax credit. The foreign taxes paid by the foreign subsidiary are considered to be indirectly, or deemed, paid by the related U.S. corporation. See column 52 of Table 1, column 38 of Table 2, and column 24 of Table 3.

*U.S. Person.*—A U.S. person is any citizen or resident of the United States, domestic partnership, corporation, association, company, or any estate or trust that is not considered "foreign." See Internal Revenue Code section 7701 for more information on the definition of a U.S. person.

### Notes and References

- [1] Except where noted otherwise, foreign-source taxable income refers to foreign-source taxable income (less loss) before adjustments made on Form 1118, Schedule J. Foreign-source taxable income before adjustments is shown in column 37 of Table 1, column 23 of Table 2, and column 14 of Table 3.
- [2] The recognition of active earnings and profits of a foreign subsidiary by the U.S. parent corporation is deferred, for U.S. tax purposes, until they are distributed or deemed distributed.

## Corporate Foreign Tax Credit, 1996: An Industry and Geographic Focus

- [3] Corporations may also choose to deduct their taxes paid on foreign-source income. For most corporations, however, the foreign tax credit provisions are more beneficial since they offer a dollar for dollar credit up to certain limitations.
- [4] Because tax returns for FSC's were not included in the sample used for the statistics, this income category is not included. However, distributions from FSC's or former FSC's are reported on the parent corporation's return and are included in these statistics when provided by taxpayers. In this study, this particular statutory category is used when corporations report an anomalous separate category of income that is otherwise unsuited for one of the existing categories of income.
- [5] See States, William "Corporate Foreign Tax Credit, 1980: An Industry Focus," *Statistics of Income Bulletin*, Summer 1984, Volume 4, Number 1.
- [6] The foreign tax credit is then also subject to a reduction on Form 1118, Schedule B, Part III for international boycott operations. This amount, however, is minor. This reduction, once in excess of \$2.7 million in the late 1970's, is now approximately \$116,000 for 1996.
- [7] The foreign tax credit limitation provisions can render part or all of the foreign taxes "unusable" under several conditions. Most commonly, the effective foreign tax rate on foreign-source income could be in excess of the U.S. tax rate or the corporation could have either an overall loss (and thus no denominator in the limitation calculation) or a foreign-source loss (and thus no numerator). The unusable current-year taxes can be carried forward or carried back subject to the applicable provisions of the carry-to year.
- [8] The income, deductions, and taxes related to foreign oil and gas extraction income (FOGEI) are reported on Schedule I, *Reduction of Oil and Gas Extraction Taxes*, of Form 1118, *Foreign Tax Credit—Corporations*. To claim the credit, the taxpayer must separate oil and gas income into two categories based on the activity producing the income: foreign oil and gas extraction income (FOGEI) and foreign oil-related income (FORI). See the *Explanation of Selected Terms* section for further definitions of these two classifications.

Interest Charge-Domestic International Sales Corporation dividends <sup>1</sup> .....	--	--	--	--	--	--
Foreign Sales Corporation dividends <sup>1</sup> .....	--	--	--	--	--	--

\* Data should be used with caution because of the small number of returns on which they are based.

<sup>1</sup> Dividends from an Interest Charge-Domestic International Sales Corporation or a Foreign Sales Corporation were not reported for specific foreign countries.

<sup>2</sup> Included in gross income (less loss), columns 2-8. See text for additional information.

<sup>3</sup> Included in total deductions, column 12. See text for additional information.

NOTES: Detail may not add to totals due to rounding and processing tolerances.
